TRANSMITTAL LETTER

Dear Sir:

In response to the Notice of Non-Compliant Appeal Brief mailed November 28, 2005,
in connection with the above-entitled matter, enclosed please find the following:

1. Appellant's Substitute Brief on Appeal, and Appendices A-H, under Rule 192.

Appellant notes there are no fees in connection with the subject filing; however, in the
event there are any fee deficiencies or additional fees are payable, please charge them (or credit
any overpayment) to our Deposit Account No. 08-1391.

Respectfully submitted,

Norman P. Soloway

MAIL STOP APPEAL BRIEF - PATENTS
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

This Second Substitute Brief is being filed in support of Appellant's Appeal from the Office Action Rejection by the Examiner to the Board of Appeals and Interferences, in place of Appellant's earlier filed Briefs which were rejected as being non-compliant (Notice of Non-Compliant Appeal Brief mailed November 28, 2005). The Notice of Appeal, along with the prescribed fee, was filed on June 2, 2005.

REAL PARTY IN INTEREST

The Real Party in Interest in this Appeal is Tohoku Techno Arch Co., Ltd., a Japanese corporation having its principal place of business at 468, Aoba, Aramaki, Aoba-ku, Sendai-shi, Miyagi 980-0845, Japan. The Application has been assigned to Tohoku Techno Arch Co., Ltd. by the inventor Masaki Yamamoto, and the Assignment recorded in the U.S. Patent and Trademark Office on July 26, 2001, at Reel 012137, Frame 0090.

RELATED APPEALS AND INTERFERENCES

To the best of the knowledge of the undersigned attorney and Appellant, there are no other appeals or interferences that would directly affect, or be directly affected by, or have a bearing on, the Board's decision in the present Appeal.

STATUS OF CLAIMS

Claims 1-7 and 12-27 have been cancelled. Claim 11 has been allowed. Claims 8-10 and 28-30 have been rejected. The claims on appeal are claims 8-10 and 28-30, and are set forth in **Appendix A**, attached hereto.

STATUS OF THE AMENDMENTS

The last amendment entered in this application is Amendment G under Rule 116 which was filed in response to a Final Action.

SUMMARY OF CLAIMED SUBJECT MATTER

The present invention relates to optical elements such as reflectors that make use of reflection by a multilayer film. Multilayer films can be used to reflect x-rays that, when irradiated toward a body, are collected to produce an enlarged image of the body. The resolution and magnification capability is achieved in part, due to the wavelength of x-rays being one several hundredth or less than the wavelength of visual or ultraviolet rays.

The invention provides a method for forming an optical element having a multilayer film reflector capable of simple wavefront phase correction. (Specification, page 7, lines 9-11). The adjustment of the wavefront phase of emerging rays is accomplished by cutting away layers of the multilayer film. (Specification, page 7, lines 12-16; page 11, lines 8-15. See also Figs. 6, 7, 8(a)-8(c), 9(a) and 9(b)). In practice, the multilayer film is composed of alternating

layers of a material having a high refractive index, and a material having a low refractive index.
(Specification, page 9, lines 21-23)

The amount of film to be removed can be controlled by detecting a difference between the materials that form the multilayer film (Fig. 9(b)). A change of material caused by milling may be monitored using an electronic method or an optical method. The electronic method may be accomplished by measuring a change in a secondary electron discharge yield. The optical method may be accomplished by measuring an optical change or using ellipsometry. These methods may also be combined. (Specification, page 13, lines 2-12 and Fig. 2).

Each of the several rejected claims 8, 9, 10, 27, 28, 29 and 30 is separately patentable.
The references are as follows:

Oshino et al., U.S. Application No. 10/241,959

Claim 53, the only claim in issue of the '959 application¹ reads as follows:

“A multilayer-film mirror, comprising:
a mirror substrate; and
a multilayer film formed on a surface of the mirror substrate by alternately laminating multiple layers of at least two types of substances having different respective refractive indices, the layers being grouped into lamina sets having a specified period length, the multilayer film including a removed portion at a selected location at which at least one lamina set is removed to control phase shift in a reflected wavefront from the multilayer film, the removed portion having a predetermined depthwise gradation with respect to amount of layer material removed.”

Kandaka, U.S. Application No. 10/297,965

Claim 9, the only claim in issue of the '965 application² reads as follows:

HAYES SOLOWAY P.C.
3450 E. SUNRISE DRIVE
SUITE 140
TUCSON, AZ 85718
TEL. 520.882.7623
FAX. 520.882.7643

175 CANAL STREET
MANCHESTER, NH 03101
TEL. 603.668.1400
FAX. 603.668.8567

¹ As noted supra, the '959 application has now issued. Claim 53 as was then pending is set forth in Oshino et al.'s November 16, 2004 Amendment (**Appendix C**).

² As noted supra, the '965 application has now issued. Claim 9 as was then pending is set forth in Kandaka's March 5, 2004 Amendment (**Appendix G**).

“A method for manufacturing a multi-layered-film reflective mirror, comprising:
 depositing, on an obverse surface of a substrate, a multi-layered film comprising superposed layers of at least two types of substances having mutually different respective refractive indices, the layers being superposed in an alternating manner with a constant period length to form a reflective surface of the mirror;
 in a region of the reflective surface requiring phase correction of a wavefront of light reflected from the multi-layered film, locally scraping the multi-layered film in the region to correct the phase; and
 on a reverse surface of the substrate, depositing a film of a substance that imparts deformation to the substrate serving to cancel at least a portion of substrate deformation caused by the scraping of the multi-layered film.”

Sweeney et al., U.S. Patent No. 6,235,434

Sweeney teaches a method for repair of amplitude and/or phase defects in lithographic masks of the kind often used in semiconductor fabrication. (Abstract, Column 1, lines 19-22) The method requires determining the equivalent size of a mask defect followed by optically compensating for the mask defect by removing a portion of the absorber material proximate to the mask defect. (Column 2, lines 47-55).

Murakami, U.S. Patent No. 6,160,867

Murakami teaches improved x-ray-reflecting mirrors that have reduced internal stress without compromising x-ray reflectance. (Abstract) The mirrors consist of a multilayer structure on a substrate. The layers are composed of alternating materials that can have internal stress controlled by controlling the amount of diffused dopant in the materials. Id. The first material consists essentially of a substance selected from the group consisting of Mo, Rh, Ru, Re, W, Ta, Ni, Cr, Al, and alloys of such substances. The second material consists essentially of silicon (as a principal constituent) and a dopant, selected from the group consisting of B, C, and P, diffused into the silicon. The dopant is at a concentration that is sufficient to reduce the net internal stress in the multi-layer structure. (Column 2, lines 52-62)

Iketaki, U.S. Patent No. 5,163,078

Iketaki teaches a multilayer film reflecting mirror suitable to be used as an optical element in an x-ray optical system. (Abstract) The thickness of coatings applied by methods such as electronic beam evaporation and sputtering can be monitored within 0.1 Å using a crystal oscillator and ellipsometer. (Column 5, lines 25-31)

Smith, U.S. Patent No. 4,590,376

Smith teaches an instrument for monitoring the surface characteristics of materials by measurement of a current of photo-emitted electrons flowing from the surface to a collector. (Abstract) The instrument transmits ultraviolet (UV) radiation against the surface to be measured and detects the emitted photoelectrons, which can be correlated to oxide thickness, contamination, or fatigue. (Abstract) The instrument includes a source of UV radiation, an electrical biasing means for creating an electrical potential between the instrument and the surface being studied in order to cause photoemitted electrons to flow from the surface to the instrument. In addition, instrument includes a charge collector, an amplifier or electrometer to produce a signal proportional to the current of the photoemitted electrons, and electronic circuitry analyze the resulting current. (Column 2, lines 35-52)

GROUND OF REJECTION TO BE REVIEWED ON APPEAL

The sole issue presented on Appeal is whether claims 8-10 and 28-30 are unpatentable under the judicially created doctrine of nonstatutory double patenting over claim 53 of then copending Application Serial No. 10/241,959 (the '959 application)³ in view of Sweeney et al., U.S. Patent No. 6,235,434 (hereinafter Sweeney et al.) alone or with Murakami or Iketaki or Iketaki and Smith; or over claim 9 of then copending Application Serial No. 10/297,965 (the

³ The '959 application issued as U.S. Patent 6,909,744, dated June 21, 2005.

'965 application)⁴ in view of Sweeney et al. alone or with Murakami or Iketaki or Iketaki and Smith. More particularly:

A) Claims 8 and 10 have been provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 53 of the '959 application in view of Sweeney et al.;

B) Claim 9 has been provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 53 of the '959 application in view of Sweeney et al. and further in view of Murakami, U.S. patent 6,160,867 (hereinafter Murakami);

C) Claims 29 and 30 have been provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 53 of the '959 application in view of Sweeney et al. and further in view of Iketaki, U.S. Patent 5,163,078 (hereinafter Iketaki);

D) Claim 28 has been provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 53 of the '959 application in view of Sweeney et al. and further in view of Iketaki and Smith, U.S. Patent 4,590,376 (hereinafter Smith);

E) Claims 8 and 10 have been provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 9 of the '965 application in view of Sweeney et al.;

F) Claim 9 has been provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 9 of the '965 application

⁴ The '965 application issued as U.S. Patent 6,898,011, dated May 24, 2005.

in view of Sweeney et al. and further in view of Murakami, U.S. Patent 6,160,867 (hereinafter Murakami);

G) Claims 29 and 30 have been provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 9 of the '965 application in view of Sweeney et al. and further in view of Iketaki, U.S. Patent 5,163,078 (hereinafter Iketaki); and

H) Claim 28 has been provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 9 of the '965 application in view of Sweeney et al. and further in view of Iketaki and Smith, U.S. Patent 4,590,376 (hereinafter Smith).

The Examiner's position is perhaps best summarized in the Advisory Action issued in response to Appellant's Request for Reconsideration in which the Examiner states:

"...Applicant argues that since the instant application pre-dates Application #10/241,959, the Examiner should withdraw the provisional double patenting rejection against the instant Application and permit the instant Application to issue as a patent (MPEP 804(I)(B)). The Examiner disagrees. Referring to MPEP 804(I)(B), it states that "(if) the 'provisional' double patenting rejections in both applications are the only rejections remaining in those applications, the examiner should then withdraw that rejection in one of the applications (e.g., the application with the earlier filing date) and permit the application to issue as a patent." Although it appears that the Examiner should withdraw the provisional double patenting rejection in the instant Application, due to its earlier filing date, the MPEP only states this as an example. The MPEP does not state that the Examiner must withdraw the provisional double patenting rejection in the application with the earlier filing date. Since Application #10/241,959 is already being permitted to issue as a patent, the Examiner is accordingly maintaining the double patenting rejection in the instant Application as a provisional double patenting rejection, based on the section in MPEP 804(I)(B) which states that "(the) examiner should maintain the double patenting rejection in the other application as a 'provisional' double patenting rejection which will be converted into a double patenting rejection when the one application issues as a patent." Therefore, Applicant's arguments are not persuasive, and the claims remain rejected."

ARGUMENT

I. The Rejection of Claims 8-10 and 28-30 as Unpatentable Under the Judicially Created Doctrine of Nonstatutory Double Patenting is Procedurally in Error. (Sections 2-13, generally of the Final Action).

The pertinent sections of the MPEP discussing the guidelines for double patenting rejections are set forth below.

§ 804(I)

A double patenting rejection may arise between two or more pending applications, between one or more pending applications and a patent, or between one or more pending applications and a published application.

§ 804(I)(A) Between Issued Patents and One or More Applications

Double patenting may exist between an issued patent and an application filed by . . . an inventive entity having a common inventor with the patent.

§ 804(I)(B) Between Copending Applications—Provisional Rejections

Occasionally, the examiner becomes aware of two copending applications filed by . . . different inventive entities having a common inventor, and/or by a common assignee that would raise an issue of double patenting if one of the applications became a patent. Where this issue can be addressed without violating the confidential status of applications (35 U.S.C. 122), the courts have sanctioned the practice of making applicant aware of the potential double patenting problem if one of the applications became a patent by permitting the examiner to make a “provisional” rejection on the ground of double patenting. The merits of such a provision rejection can be addressed by both the applicant and the examiner without waiting for the first patent to issue.

The “provisional” double patenting rejection should continue to be made by the examiner in each application as long as there are conflicting claims in more than one application unless that “provisional” double patenting rejection is the only rejection remaining in one of the applications. If the “provisional” double patenting rejection in one application is the only rejection remaining in that application, the examiner should then withdraw that rejection and permit the application to issue as a patent thereby converting the “provisional” double patenting rejection in the other application(s) into a double patenting rejection at the time the one application issues as a patent.

If the “provisional” double patenting rejections in both applications are the only rejections remaining in those applications, the examiner should then withdraw that rejection in one of the applications (e.g., the application with the earlier filing date) and permit the application to issue as a patent. The examiner should maintain the double patenting rejection in the other application as a “provisional” double patenting rejection which will be converted into a double

patenting rejection when the one application issues as a patent. (Underlining added for emphasis).

The linchpins of the Examiner's nonstatutory double patenting rejections are Oshino et al., U.S. Application No. 10/241,959 (the '959 application) and Kandaka et al., U.S. Application No. 10/297,965 (the '965 application). The '959 application has a U.S. filing date of September 11, 2002 and a foreign priority date of September 26, 2001 and is the joint invention of Masaki Yamamoto, the Appellant hereof, and Tetsuya Oshino, Katsuhiko Murakami, Hiroyuki Kondo and Katsumi Sugisaki. The '959 application is assigned to Nikon Corp. As noted, *supra*, the '959 application has since issued as U.S. Patent 6,909,774. The '965 application has a U.S. filing date (via PCT) of February 26, 2002, and is a joint invention of Noriaki Kandaka and Masaki Yamamoto, the Appellant hereof. The '965 application is assigned to Nikon Corporation. As noted, *supra*, the '965 application has since issued as U.S. Patent No. 6,898,011.

The application on Appeal has a U.S. filing date of July 26, 2001 and a foreign priority date of November 29, 1999. The sole inventor is Masaki Yamamoto. The application on Appeal is assigned to Tohoku Techno Arch Co., Ltd. This application stands finally rejected.

The '959 application and the '965 application cited by the Examiner both involve different inventive entities than the application on Appeal. Only the '959 application has a common inventor (Masaki Yamamoto) with the application on Appeal. The '959 application was filed in the U.S. more than one year after and has a foreign priority date nearly two years later than the application on Appeal. The '965 application has an effective U.S. filing date (via PCT) which is more than one year after the priority date of the application on Appeal. The '959 application and the '965 application both are assigned to different assignees than the application on Appeal. Thus, since the '959 application and the application on Appeal are not

commonly owned, and the '965 application and the application on Appeal are not commonly owned, a terminal disclaimer cannot be filed in this case even if the non-statutory double patenting rejection were otherwise proper, which it is not.

A. Examiner Did Not Specify Whether Both Pending Applications Were Subject to Provisional Double Patenting Rejections.

The threshold requirement imposed by MPEP § 804(I)(B) is that in the appropriate case (i.e., when the examiner becomes aware of two copending applications by different inventive entities having a common inventor that would raise an issue of double patenting if one of the applications became a patent), “[t]he ‘provisional’ double patenting rejection should continue to be made by the examiner in each application.” (Emphasis added) Consultation of the file wrapper (**Appendix B**) of the '959 application (see **Appendix D** which comprises the one substantive Office Action issued in the '959 application) and the file wrapper of the '965 application (see **Appendix H**) which comprises the one substantive Office Action issued in the '965 application) reveals that no such rejection was made between either the '959 application and the '965 application and the Application on Appeal.⁵ Accordingly, the PTO erred in raising a provisional double patenting rejection to only the application on Appeal.

B. Examiner Did Not Specify Whether Provisional Double Patenting Rejections Were the Only Remaining Objections for Both Applications.

Section 804(I)(B) provides an exception to the imposition of the double patenting rejection when an application's only remaining rejection is a “provisional” double patenting rejection. Such is the case in the application on Appeal. Therefore, according to § 804(I)(B), “the examiner should then withdraw that rejection and permit the application to issue as a

⁵ The Examiner did, however, raise a provisional type double patenting rejection in the '965 application with respect to the '959 application, and also Application Serial No. 10/229,638!

patent.” In theory, if no provisional double patenting rejection existed in the ‘959 application or in the ‘965 application, the provisional rejection should have been withdrawn from the current application, and the application permitted to issue as a patent.

As the Examiner points out in the Advisory Action, § 804(I)(B) provides, in certain circumstances, for a provisional double patenting rejection to be upheld “[i]f the ‘provisional’ double patenting rejections in both applications are the only rejections remaining in those applications” (underlining added for emphasis). In that case, “the examiner should then withdraw that rejection in one of the applications . . . and permit the application to issue as a patent. The examiner should maintain the double patenting rejection in the other application” Assuming *arguendo* that the only outstanding rejection of the ‘959 application and in the ‘965 application was also an nonstatutory double patenting rejection,⁶ the Examiner has taken the position that the double patenting rejection should withdrawn from the ‘959 application and from the ‘965 application and maintained in the application on Appeal as a provisional rejection until the ‘959 patent and the ‘965 patent finally issue, and upon issuance of the ‘959 application and the ‘965 application, the provisional rejection of the application on Appeal will be converted into a non-provisional rejection.⁷

C. Examiner Did Not Specify What Criteria (If Not Filing Date) Were Used to Determine Selection of Issuing Patent.

Although the factual and procedural posture of the application on Appeal are somewhat unusual, a central issue on appeal involves the argument raised by the Examiner in the Advisory Action. In the case of two applications, both having their only respective rejections

⁶ *See* Section A, *supra*, discussing the lack of provisional double patenting rejections in both applications involved in this case.

⁷ MPEP § 804(I)(B).

being provisional nonstatutory double patenting rejections⁸ what criteria are to be used to decide which application to withdraw and which application to maintain the double patenting rejection? According to the Examiner, § 804(I)(B) merely provides one example of withdrawing the provisional rejection in the application having the earlier filing date. Indeed, there is no other more appropriate criteria to use in making such a determination. However, in the instant case and without reason, explanation, or justification the Examiner raised a provisional double patenting rejection only in the application on Appeal (which has the earlier filing date) while allowing both the '959 application the with the later filing date and the '965 application with a later filing date to proceed to allowance. This is the incorrect result.

According to Chisum:

The double patenting doctrine precludes one person from obtaining more than one valid patent for the same invention or obvious modifications of the same invention. Double patenting is concerned with attempts to claim related subject matter twice. It does not preclude a second patent on subject matter that is disclosed but not claimed in the first patent.

The primary purpose of the double patenting doctrine is to prevent an extension of the statutory period of monopoly that would occur if successive patents were allowed on the same basic concept.

* * *

The courts developed the double patenting doctrine in an era during which all United States patents had a term of years beginning at the date the patent issued. A patent's expiration was a function of its issue date, and a second patent would extend the monopoly period if it was issued later in time. Under the 1994 Uruguay Round Agreements Act, the term of some patents will be set so that they expire a number of years after their earliest referenced application filing date. This change will alter the scenarios raising double patenting concerns, but it does not alter the fundamental policies against issuing multiple patents for the same claimed invention or for obvious variations of the same invention.⁹

TEL. 603.668.1400
FAX. 603.668.8567

⁸ No provisional nonstatutory double patenting rejection was ever raised in either the '959 application (**Appendix D**) or the '965 application (**Appendix H**) with respect to the application on Appeal.

⁹ 3 Donald S. Chisum, CHISUM ON PATENTS § 9.01 (2003) (internal citations removed).

The application on Appeal claims a method for forming an optical element by stacking alternating layers of high refractive index material and low index material on a substrate followed by cutting away portions of the multilayer film in order to adjust the wavefront phase. (Appendix A). Claim 53 of the '959 application is a product claim directed toward a multilayer film mirror comprising a substrate and a multilayer film formed on the surface of the mirror substrate by alternately laminating multiple layers of at least two types of substances having different respective refractive indices, the layers being grouped into lamina sets having a specified period length, the multilayer film including removed portions at a selected location at which at least one lamina set is removed to control phase shift in a reflected wavefront from the multilayer film, the removed portion having a predetermined depthwise gradation with respect to the amount of layer material removed. (Appendix C).

Had the earlier filed application on Appeal issued first, would the later filed '959 application and the '965 application be rejected for double patenting? In fact, rejection of the application on Appeal is a particularly unsupportable use of the double patenting rejection because under no circumstances could a patent on the instant invention provide an extension of the monopoly because any patent on the application on Appeal would expire before a patent issuing from the '959 application or from the '965 application since the application on Appeal was filed before the '959 application and the '965 application!

As courts and commentators have observed:

An inventor may first file an application for a patent claiming a basic or generic invention and thereafter file a patent on an improvement on that basic invention. The broader basic patent may face greater difficulty in the Patent Office examination process with the result that a patent on the improvement issues first. The question then arises whether a second patent on the broader generic invention is barred by double patenting. Under general principles of patentability, an earlier patent anticipates a later generic one. . . . On the other hand, to deny a patent may be unfair to the applicant who does not have

complete control over the rate of progress of an application through the Patent Office.¹⁰

Here, the imposition of the double patenting rejection on the earlier filed application on Appeal is particularly inequitable because the first filed application was the invention of the sole inventor of the subject matter. The double patenting rejection, as currently applied, essentially transfers his rights as sole inventor of the underlying technology to the group of inventors (of which he is just one member) that developed the further improvements on the technology.

Thus, the rejection of claims 8-10 and 28-30 as unpatentable under the judicially created doctrine of nonstatutory double patenting is procedurally in error.

¹⁰ 3 Donald S. Chisum, CHISUM ON PATENTS § 9.03[2][c] (internal citations removed). *See also Thomson-Houston Electric Co. v. Ohio Brass*, 80 F. 712, 724 (6th Cir. 1897) wherein Judge Taft addressed this issue:

Since the case of *O'Reilly v. Morse* . . . it has been well settled that a patent may issue for an improvement on an earlier invention either to the original inventor or to a stranger. Of course, no one can use the improvement without right or license to use the fundamental invention; but, on the other hand, the right to use the original invention does not confer the right to use the improvement without license from the tributary inventor. We do not understand this general doctrine to be denied, but it is said that if, by some chance, the application for the fundamental patent is delayed in its course through the patent office until a patent on the avowed improvement has issued, then the patent on the improvement on the fundamental invention is void. In cases where the delay in the issuing of the patent for the main invention cannot be charged to the laches [sic] or fraud of the patentee, such a rule would be a hard one; and unless it is required by the express words of the statute, or by the express holding of the supreme court [sic], we should be inclined, if possible, to avoid declaring it to exist.

II. The Rejection of Claim 8 for obviousness-type double patenting as being unpatentable over claim 53 of the '959 application in view of Sweeney et al. is in error. (Section 3 of the Final Action).

Double patenting is all about what is being claimed. Claim 53 of the '959 application is a product claim. Claim 8 on appeal is a method claim. Thus, on that basis alone, the claims are distinct. Indeed, in the prosecution of the '959 application, the Examiner twice raised restriction requirements between the then pending method claims and product claims, taking the position that the method claimed inventions and the product claimed inventions were both distinct and unrelated. (See Office Action of December 5, 2003 (**Appendix E**) and Office Action of May 17, 2004 (**Appendix F**)¹¹).

In the '959 application, the Examiner took the position that the method claims were distinct and unrelated inventions. Here, the Examiner takes the position that method claim 8 of the application on Appeal is the same invention as product claim 53 of the '959 application. Curiously, the Examiner who signed off on the restriction requirement in the '959 application, is the same Examiner who signed off on the Advisory Action in the application on Appeal! Having taken the position that the method claims and product claims are distinct and that the inventions unrelated in the '959 application, it is error to now take the position that the method claims in the application on Appeal are not patentably distinct from the product claims of the '959 application. Adding Sweeney et al. does not change this. Thus, the rejection of claim 8 under the judicially created doctrine of obviousness-type double patenting over claim 53 of copending application '959 in view of Sweeney et al. is in error.

FAX. 603.668.8567

¹¹ The restriction requirement was made final in the July 14, 2004 Action (**Appendix D**)

III. The Rejection of Claim 9 for obviousness-type double patenting as being unpatentable over claim 53 of the '959 application in view of Sweeney et al. and Murakami is in error. (Section 5 of the Final Rejection).

Similar comments apply to the rejection of claim 9. Claim 53 of the '959 application is a product claim. Claim 9 on appeal is a method claim. Thus, on that basis alone, the claims are distinct. Moreover, as noted, *supra*, in the prosecution of the '959 application, the Examiner twice raised restriction requirements between the then pending method claims and product claims, taking the position that the method claimed inventions and the product claimed inventions were both distinct and unrelated. (See Office Action of December 5, 2003 (**Appendix E**) and Office Action of May 17, 2004 (**Appendix F**)¹²).

In the '959 application, the Examiner took the position that the method claims were distinct and unrelated inventions. Here, the Examiner takes the position that method claim 9 of the application on Appeal is the same invention as product claim 53 of the '959 application. Curiously, the Examiner who signed off on the restriction requirement in the '959 application, is the same Examiner who signed off on the Advisory Action in the application on Appeal! Having taken the position that the method claims and product claims are distinct and that the inventions unrelated in the '959 application, it is error to now take the position that the method claims in the application on Appeal are not patentably distinct from the product claims of the '959 application. Adding Sweeney et al. and Murakami does not change this. Thus, the rejection of claim 9 under the judicially created doctrine of obviousness-type double patenting over claim 53 of copending application '959 in view of Sweeney et al. and Murakami is in error.

¹² The restriction requirement was made final in the July 14, 2004 Action (**Appendix D**)

IV. The Rejection of Claim 10 for obviousness-type double patenting as being unpatentable over claim 53 of the '959 application in view of Sweeney et al. is in error. (Section 4 of the Final Rejection).

Similar comments also apply to the rejection of claim 10. Claim 53 of the '959 application is a product claim. Claim 10 on appeal is a method claim. Thus, on that basis alone, the claims are distinct. As noted, *supra*, in the prosecution of the '959 application, the Examiner twice raised restriction requirements between the then pending method claims and product claims, taking the position that the method claimed inventions and the product claimed inventions were both distinct and unrelated. (See Office Action of December 5, 2003 (Appendix E) and Office Action of May 17, 2004 (Appendix F)¹³).

In the '959 application, the Examiner took the position that the method claims were distinct and unrelated inventions. Here, the Examiner takes the position that method claim 10 of the application on Appeal is the same invention as product claim 53 of the '959 application. Curiously, the Examiner who signed off on the restriction requirement in the '959 application, is the same Examiner who signed off on the Advisory Action in the application on Appeal! Having taken the position that the method claims and product claims are distinct and that the inventions unrelated in the '959 application, it is error to now take the position that the method claims in the application on Appeal are not patentably distinct from the product claims of the '959 application. Adding Sweeney et al. does not change this. Thus, the rejection of claim 10 under the judicially created doctrine of obviousness-type double patenting over claim 53 of copending application '959 in view of Sweeney et al. is in error.

HAYES SOLOWAY P.C.

¹³ The restriction requirement was made final in the July 14, 2004 Action (Appendix D)

V. The Rejection of Claim 28 for obviousness-type double patenting as being unpatentable over claim 53 of the '959 application in view of Sweeney et al. in view of Iketaki and Smith is in error. (Section 7 of the Final Rejection).

Like comments apply to the rejection of claim 28. Claim 53 of the '959 application is a product claim. Claim 28 on appeal is a method claim. Thus, on that basis alone, the claims are distinct. In the prosecution of the '959 application, the Examiner twice raised restriction requirements between the method claims and product claims, taking the position that the method claimed inventions and the product claimed inventions were both distinct and unrelated. (See Office Action of December 5, 2003 (**Appendix E**) and Office Action of May 17, 2004 (**Appendix F**)¹⁴).

In the '959 application, the Examiner took the position that the method claims were distinct and unrelated inventions. Here, the Examiner takes the position that method claim 28 of the application on Appeal is the same invention as product claim 53 of the '959 application. Curiously, the Examiner who signed off on the restriction requirement in the '959 application, is the same Examiner who signed off on the Advisory Action in the application on Appeal! Having taken the position that the method claims and product claims are distinct and that the inventions unrelated in the '959 application, it is error to now take the position that the method claims in the application on Appeal are not patentably distinct from the product claims of the '959 application. Adding Sweeney et al., Iketaki and Smith does not change this. Thus, the rejection of claim 28 under the judicially created doctrine of obviousness-type double patenting over claim 53 of copending application '959 in view of Sweeney et al., Iketaki and Smith is in error.

¹⁴ The restriction requirement was made final in the July 14, 2004 Action (**Appendix D**)

VI. The Rejection of Claim 29 for obviousness-type double patenting as being unpatentable over claim 53 of the '959 application in view of Sweeney et al. and Iketaki is in error. (Section 6 of the Final Rejection).

Like comments also apply to the rejection of claim 29. As noted, *supra*, claim 53 of the '959 application is a product claim. Claim 29 on appeal is a method claim. Thus, on that basis alone, the claims are distinct. As noted, *supra*, in the prosecution of the '959 application, the Examiner twice raised restriction requirements between the then pending method claims and product claims, taking the position that the method claimed inventions and the product claimed inventions were both distinct and unrelated. (See Office Action of December 5, 2003 (Appendix E) and Office Action of May 17, 2004 (Appendix F)¹⁵).

In the '959 application, the Examiner took the position that the method claims were distinct and unrelated inventions. Here, the Examiner takes the position that method claim 29 of the application on Appeal is the same invention as product claim 53 of the '959 application. Curiously, the Examiner who signed off on the restriction requirement in the '959 application, is the same Examiner who signed off on the Advisory Action in the application on Appeal! Having taken the position that the method claims and product claims are distinct and that the inventions unrelated in the '959 application, it is error to now take the position that the method claims in the application on Appeal are not patentably distinct from the product claims of the '959 application. Adding Sweeney et al. and Iketaki does not change this. Thus, the rejection of claim 29 under the judicially created doctrine of obviousness-type double patenting over claim 53 of copending application '959 in view of Sweeney et al. and Iketaki is in error.

TEL. 603.668.1400
FAX. 603.668.8567

¹⁵ The restriction requirement was made final in the July 14, 2004 Action (Appendix D)

VII. The Rejection of Claim 30 for obviousness-type double patenting as being unpatentable over claim 53 of the '959 application in view of Sweeney et al. and Iketaki is in error. (Section 6 of the Final Rejection).

The rejection of claim 30 likewise is in error. Claim 53 of the '959 application is a product claim. Claim 30 on appeal is a method claim. Thus, on that basis alone, the claims are distinct. In the prosecution of the '959 application, the Examiner twice raised restriction requirements between the then pending method claims and product claims, taking the position that the method claimed inventions and the product claimed inventions were both distinct and unrelated. (See the Office Action of December 5, 2003 (**Appendix E**) and Office Action of May 17, 2004 (**Appendix F**)¹⁶).

In the '959 application, the Examiner took the position that the method claims were distinct and unrelated inventions. Here, the Examiner takes the position that method claim 30 of the application on Appeal is the same invention as product claim 53 of the '959 application. Curiously, the Examiner who signed off on the restriction requirement in the '959 application, is the same Examiner who signed off on the Advisory Action in the application on Appeal! Having taken the position that the method claims and product claims are distinct and that the inventions unrelated in the '959 application, it is error to now take the position that the method claims in the application on Appeal are not patentably distinct from the product claims of the '959 application. Adding Sweeney et al. and Iketaki does not change this. Thus, the rejection of claim 30 under the judicially created doctrine of obviousness-type double patenting over claim 53 of copending application '959 in view of Sweeney et al. and Iketaki is in error.

¹⁶ The restriction requirement was made final in the July 14, 2004 Action (**Appendix D**)

VIII. The Rejection of Claim 8 for obviousness-type double patenting as being unpatentable over claim 9 of the '965 application in view of Sweeney et al. is in error. (Section 9 of the Final Action).

Double patenting is all about what is being claimed. The Examiner acknowledges that claim 9 of the '965 application does not claim a method for forming a film consisting of a stack of high and low refractive index materials to control an amplitude of emerging rays and cutting away as required by claim 8 on Appeal. Thus, on that basis alone, the claims are distinct. Adding Sweeney et al. does not change this. Thus, the rejection of claim 8 under the judicially created doctrine of obviousness-type double patenting over claim 9 of copending application '965 in view of Sweeney et al. is in error.

IX. The Rejection of Claim 9 for obviousness-type double patenting as being unpatentable over claim 9 of the '965 application in view of Sweeney et al. and Murakami is in error. (Section 11 of the Final Rejection).

Similar comments apply to the rejection of claim 9. Claim 9 is dependent on claim 8 and thus must be construed to include all the limitations of claim 8. The deficiencies of the '965 application and Sweeney et al. are discussed above relative to claim 8. Adding Murakami does not change this. Thus, the rejection of claim 9 under the judicially created doctrine of obviousness-type double patenting over claim 9 of copending application '965 in view of Sweeney et al. and Murakami is in error.

HAYES SOLOWAY P.C.

X. The Rejection of Claim 10 for obviousness-type double patenting as being unpatentable over claim 9 of the '965 application in view of Sweeney et al. is in error. (Section 10 of the Final Rejection).

Claim 10 also is dependent on claim 8. Thus, deficiencies of the '965 application and Sweeney et al. are discussed above relative to claim 8. Thus, similar comments also apply to the rejection of claim 10, and the rejection of claim 10 under the judicially created doctrine of obviousness-type double patenting over claim 9 of copending application '965 in view of Sweeney et al. is in error.

HAYES SOLOWAY P.C.

XI. The Rejection of Claim 28 for obviousness-type double patenting as being unpatentable over claim 9 of the '965 application in view of Sweeney et al. in view of Iketaki and Smith is in error. (Section 13 of the Final Rejection).

Claim 28 is dependent on claim 10, which is, in turn, dependent on claim 8. Thus, the deficiencies of the '965 application and Sweeney et al. are discussed above relative to claim 8. Thus, like comments apply to the rejection of claim 28, and adding Iketaki and Smith to Sweeney et al. does not change this. Thus, the rejection of claim 28 under the judicially created doctrine of obviousness-type double patenting over claim 9 of copending application '965 in view of Sweeney et al., Iketaki and Smith is in error.

XII. The Rejection of Claim 29 for obviousness-type double patenting as being unpatentable over claim 53 of the '965 application in view of Sweeney et al. and Iketaki is in error. (Section 12 of the Final Rejection).

Claim 29, like claim 28, is also dependent on claim 10 which in turn is dependent on claim 8. Thus, the deficiencies of the '965 application and Sweeney are discussed above relative to claim 8. Thus, like comments also apply to the rejection of claim 29, and adding Iketaki to Sweeney et al. does not change this. Thus, the rejection of claim 29 under the judicially created doctrine of obviousness-type double patenting over claim 9 of copending application '965 in view of Sweeney et al. and Iketaki is in error.

XIII. The Rejection of Claim 30 for obviousness-type double patenting as being unpatentable over claim 9 of the '965 application in view of Sweeney et al. and Iketaki is in error. (Section 12 of the Final Rejection).

Claim 30 is dependent on claim 29 which in turn depends on claim 10 which depends on claim 8. The deficiencies of the rejection of claim 8 as being unpatentable over the '965 application in view of Sweeney et al. are discussed above. The rejection of claim 30 likewise is in error, and adding Iketaki to Sweeney et al. does not change this. Thus, the rejection of claim 30 under the judicially created doctrine of obviousness-type double patenting over claim 9 of copending application '965 in view of Sweeney et al. and Iketaki is in error.

APPENDIX A

Claims on Appeal

APPENDIX A

CLAIMS ON APPEAL

Claim 8: A method for forming an optical element comprising the steps of:

forming on a substrate a multilayer film consisting of a stack of alternating layers of high refractive index material and low refractive index material to control a phase and an amplitude of emerging rays; and

adjusting a wavefront phase of the emerging rays by cutting away a portion of the multilayer film stack in accordance with an amount of adjustment of the wavefront phase.

Claim 9: A method according to claim 8, wherein the multilayer film stack is formed in a number of cycles larger than that necessary to saturate a reflectance.

Claim 10: A method according to claim 8, wherein cutting-away of the multilayer film is controlled by detecting a difference in a material that forms the multilayer film stack.

Claim 28: A method according to claim 10, wherein a difference in material is detected by monitoring a secondary electron discharge.

Claim 29: A method according to claim 10, wherein a difference in material is detected by monitoring an optical change of characteristics.

Claim 30: A method according to claim 29, wherein said optical change of characteristics monitored is a change in an optical constant of visible rays or a change based on ellipsometry.

APPENDIX C

(Amendment of November 16, 2004 for 10/241,959 Application)

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

In re application of: Oshino et al.

Application No. 10/241,959

Filed: September 11, 2002

Confirmation No. 8759

For: APPARATUS AND METHODS FOR
SURFICIAL MILLING OF SELECTED
REGIONS ON SURFACES OF
MULTILAYER FILM REFLECTIVE
MIRRORS AS USED IN X-RAY OPTICAL
SYSTEMS

Examiner: Jurie Yun

Art Unit: 2882

Attorney Reference No. 4641-63481-01

MAIL STOP AMENDMENT
COMMISSIONER FOR PATENTS
P.O. BOX 1450
ALEXANDRIA, VA 22313-1450

CERTIFICATE OF MAILING

I hereby certify that this paper and the documents referred to as being attached or enclosed herewith are being deposited with the United States Postal Service as First Class Mail in an envelope addressed to: MAIL STOP AMENDMENT, COMMISSIONER FOR PATENTS, P.O. BOX 1450, ALEXANDRIA, VA 22313-1450 on the date shown below.

Attorney
for Applicant(s)

Date Mailed November 16, 2004

Donald L. Stephens Jr.

TRANSMITTAL LETTER

Enclosed for filing in the application referenced above are the following:

- ☒ Response to Notice of Non-Compliant Amendment
- ☒ The Director is hereby authorized to charge any additional fees that may be required, or credit over-payment, to Deposit Account No. 02-4550. A copy of this sheet is enclosed.
- ☒ Please return the enclosed postcard to confirm that the items listed above have been received.

Respectfully submitted,

KLARQUIST SPARKMAN, LLP

RESPONSE TO NOTICE OF NONCOMPLIANT AMENDMENT

This paper is submitted in reply to the Notice of Non-Compliant Amendment dated November 8, 2004. Since the alleged non-compliance pertains only to the claims, this paper only includes the "Amendments to the Claims" section from the original Amendment filed on October 26, 2004.

Respectfully submitted,

Amendments to the Claims

1. (withdrawn) A device for milling a surface of a multilayer film on a multilayer-film reflective mirror, the multilayer film comprising multiple lamina sets formed at a specified period length on a mirror substrate, each lamina set consisting of alternating respective layers of at least two substances having different refractive indices to a wavelength of light to be reflected from the mirror, the device comprising a milling tool configured to remove one or more layers of the multilayer film at a selected location on the surface of the multilayer film so as to correct a phase shift in a wavefront of the light reflected from the multilayer-film mirror.

2. (withdrawn) The device of claim 1, further comprising a stage for holding the multilayer-film mirror relative to the milling tool.

3. (withdrawn) The device of claim 2, wherein the stage is configured to move the multilayer-film mirror in at least an X-Y or X- θ plane relative to the milling tool.

4. (withdrawn) The device of claim 1, wherein the milling tool is configured to remove one or more surficial lamina sets from the selected location in a manner yielding a desired depth profile of removed layers.

5. (withdrawn) The device of claim 1, wherein the milling tool is configured to remove one or more layers from the selected location in a manner yielding a desired lateral profile of removed layers.

6. (withdrawn) The device of claim 1, wherein the milling tool is a lapping tool.

7. (withdrawn) The device of claim 6, wherein the lapping tool comprises:
a lapping pad having a width smaller than a width dimension of the multilayer film;
a movement mechanism configured to move at least one of the multilayer-film mirror and the lapping tool relative to each other; and
a controller connected to the lapping tool and the movement mechanism, the controller being configured to control actuation of at least one of the lapping tool and the movement mechanism.

8. (withdrawn) The device of claim 6, comprising multiple lapping tools, one for application to each layer of a respective material.

9. (withdrawn) The device of claim 8, wherein each lapping tool is independently movable relative to the multilayer-film mirror.

10. (withdrawn) The device of claim 8, further comprising a controller connected to the multiple lapping tools and configured to select a particular lapping tool to contact the multilayer film at the selected location, based on the particular layer material to be milled at the location.

11. (withdrawn) The device of claim 6, further comprising a lapping-liquid dispenser situated relative to the lapping tool so as to dispense lapping liquid at the selected location whenever the lapping tool is removing material from the selected location.

12. (withdrawn) The device of claim 1, wherein the milling tool is an ion-beam milling tool.

13. (withdrawn) The device of claim 12, wherein the ion-beam milling tool comprises:

an ion source situated and configured to irradiate the selected location with a beam of ions;

a movement mechanism configured to move at least one of the multilayer-film mirror and the ion source relative to each other; and

a controller connected to the ion source and the movement mechanism, the controller being configured to control actuation of at least one of the ion source and the movement mechanism.

14. (withdrawn) The device of claim 13, further comprising a mask member situated between the ion source and the surface of the multilayer film, the mask member defining an opening serving to limit lateral spread of the ion beam as incident on the selected location on the surface of the multilayer film.

15. (withdrawn) The device of claim 12, further comprising a beam-adjustment mechanism configured to impart a preselected ion-density distribution to the beam as irradiated at the selected location on the surface of the multilayer film.

16. (withdrawn) The device of claim 15, wherein the beam-adjustment mechanism comprises an electrostatic or electromagnetic lens element situated upstream of the multilayer-film mirror and configured to change a diameter of the beam as incident on the multilayer-film surface.

17. (withdrawn) The device of claim 12, wherein the ion source produces a focused ion beam as incident on the selected location on the surface of the multilayer film.

18. (withdrawn) The device of claim 12, further comprising a gas supply connected to the ion source, the gas supply being configured to deliver a flow of ionizable gas to the ion source such that the ion source produces a beam of ions of the gas and directs the beam toward the surface of the multilayer film.

19. (withdrawn) The device of claim 18, wherein the gas is selected from the group consisting of argon, xenon, and krypton.

20. (withdrawn) The device of claim 1, wherein the milling tool is a plasma-enhanced chemical-vapor-machining (CVM) tool.

21. (withdrawn) The device of claim 20, wherein the plasma-enhanced CVM tool comprises:

a plasma-generation source configured to generate a plasma and to cause the plasma to be situated adjacent the selected location on the surface of the multilayer film;

a movement mechanism configured to move at least one of the multilayer-film mirror and the plasma-generation source relative to each other; and

a controller connected to the plasma-generation source and the movement mechanism, the controller being configured to control actuation of at least one of the plasma-generation source and the movement mechanism.

22. (withdrawn) The device of claim 21, further comprising a gas supply situated and configured to deliver a stream of gas to the plasma adjacent the selected location, the gas being formulated to generate, in the plasma, free radicals that react with the surface of the multilayer film at the selected location.

23. (withdrawn) The device of claim 1, wherein the milling tool is a reactive-ion-etching (RIE) tool.

24. (withdrawn) The device of claim 1, wherein the milling tool is a localized-chemical-reaction tool.

25. (withdrawn) The device of claim 1, wherein the milling tool is a laser ablation tool.

26. (withdrawn) The device of claim 1, further comprising a position detector situated and configured to detect a position of the multilayer-film mirror.

27. (withdrawn) A method for milling a surface of a multilayer film on a multilayer-film reflective mirror so as to correct a phase shift in a reflected wavefront from the multilayer-film mirror, the multilayer film comprising multiple lamina sets formed at a specified period length on a mirror substrate, each lamina set consisting of alternating respective layers of at least two substances having different refractive indices to a wavelength of light to be reflected from the mirror, the method comprising the steps:

directing a layer-material-milling force at the selected location on the surface of the multilayer film so as to remove at least one layer from the selected location; and

while removing the at least one layer at the selected location, providing a desired distribution in the amount of material removed at the location.

28. (withdrawn) The method of claim 27, wherein the step of providing a desired distribution comprises providing a desired depth distribution.

29. (withdrawn) The method of claim 28, wherein the desired depth distribution is stepwise.

30. (withdrawn) The method of claim 28, wherein the desired depth distribution is smoothly contoured.

31. (withdrawn) The method of claim 27, wherein the step of providing a desired distribution comprises providing a desired lateral distribution.

32. (withdrawn) The method of claim 27, wherein the step of directing a layer-material-milling force comprises selecting at least one parameter of the layer-material-milling force according to the layer material being milled at the selected location on the surface of the multilayer film.

33. (withdrawn) The method of claim 27, further comprising the step of producing the layer-material-milling force.

34. (withdrawn) The method of claim 33, wherein the produced layer-material-milling force comprises lapping.

35. (withdrawn) The method of claim 33, wherein the produced layer-material-milling force comprises ion-beam milling.

36. (withdrawn) The method of claim 33, wherein the produced layer-material-milling force comprises plasma-enhanced chemical vapor machining.

37. (withdrawn) The method of claim 33, wherein the produced layer-material-milling force comprises reactive-ion etching.

38. (withdrawn) The method of claim 33, wherein the produced layer-material-milling force comprises localized chemical reaction.

39. (withdrawn) The method of claim 33, wherein the produced layer-material-milling force comprises laser ablation.
40. (withdrawn) The method of claim 27, wherein the step of directing a layer-material-milling force comprises selecting a respective layer-material-milling force according to the layer material being milled at the selected location on the surface of the multilayer film.
41. (withdrawn) The method of claim 27, wherein the step of directing a layer-material-milling force comprises disposing a mask member on or near the selected location on the surface of the multilayer film to limit the removal one or more layers at the selected location.
42. (withdrawn) The method of claim 41, wherein the step of disposing the mask member comprises applying a patterned resist to at least a portion of the surface of the multilayer film including the selected location.
43. (withdrawn) The method of claim 42, wherein the resist is applied and patterned by microlithography.
44. (withdrawn) The method of claim 43, further comprising the step of milling a portion of the multilayer film at the selected location using the resist pattern as a mask.
45. (withdrawn) The method of claim 44, further comprising the steps of:
removing the mask;
applying a new resist;
patterning the new resist; and
milling a portion of the multilayer film at the selected location using the newly patterned resist as a mask so as mill the selected location according to a desired profile.
46. (withdrawn) The method of claim 45, wherein the desired profile is a depth profile.
47. (withdrawn) The method of claim 46, wherein the depth profile is stepwise.

48. (withdrawn) The method of claim 46, wherein the depth profile is smoothly contoured.

49. (withdrawn) The method of claim 40, wherein the step of directing a layer-material-milling force comprises:

applying a resist to the surface of the multilayer film;

patterning the resist so as to define in the resist a thickness distribution of layers at the selected location on the surface of the multilayer film; and

milling the surface of the multilayer film at the selected location according to the resist pattern.

50. (withdrawn) The method of claim 49, wherein the resist is patterned microlithographically by directing an exposure light flux at the resist.

51. (withdrawn) The method of claim 50, wherein the resist is patterned by irradiation with the exposure light flux configured to have a desired light-intensity distribution corresponding to the thickness distribution.

52. (withdrawn) The method of claim 51, wherein the exposure light flux is configured by light interference to have the desired light-intensity distribution.

53. (currently amended) A multilayer-film mirror, comprising:

a mirror substrate; and

a multilayer film formed on a surface of the mirror substrate by alternately laminating multiple layers of at least two types of substances having different respective refractive indices, the layers being grouped into lamina sets having a specified period length, the multilayer film including a removed portion at a selected location at which at least one lamina set is removed to control phase shift in a reflected wavefront from the multilayer film, the removed portion having a predetermined ~~distribution~~ depthwise gradation with respect to amount of layer material removed.

54. (original) An X-ray optical system, comprising at least one multilayer-film mirror as recited in claim 53.

55. (original) An X-ray exposure apparatus, comprising an X-ray optical system as recited in claim 54.

56. (withdrawn) A multilayer-film mirror produced using the apparatus of claim 1.

57. (withdrawn) A multilayer-film mirror produced by the method of claim 27.

58. (original) An X-ray exposure apparatus, comprising:
an X-ray source that generates an X-ray beam;
an illumination-optical system that guides the X-ray beam from the X-ray source to a reticle that defines a pattern; and
a projection-optical system that guides the X-ray beam from the reticle to a lithographic substrate coated with a resist, so as to transfer the pattern from the reticle to the substrate, the exposure apparatus including at least one multilayer-film mirror as recited in claim 53.

59. (original) The X-ray exposure apparatus of claim 58, wherein the at least one multilayer-film mirror is situated in at least one of the illumination-optical system, the projection-optical system, and the reticle.

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
 - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
 - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
 - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 07 June 2004.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 53-55, 58 and 59 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 53-55, 58 and 59 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Election/Restrictions

1. It is noted that in the last office action, the restriction requirement inadvertently stated that Group III included claims 53-59, but should have said claims 53-55 and 58-59, and an action on claims 53-55 and 58-59 follows. Applicant's election of Group III in the reply filed on 6/7/04 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)). The restriction requirement is made final.

Specification

2. The abstract of the disclosure is objected to because it consists of more than 150 words. Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 53-55, 58, and 59 are rejected under 35 U.S.C. 102(e) as being anticipated by Yan (USPN 6,641,959 B2).

Art Unit: 2882

5. With respect to claim 53, Yan discloses a multilayer-film mirror, comprising: a mirror substrate (Figs 1a-1g, 1100); and a multilayer film (1200 & 1400) formed on a surface of the mirror substrate by alternately laminating multiple layers of at least two types of substances having different respective refractive indices (1210 & 1220 and 1410 & 1420), the layers being grouped into lamina sets having a specified period length (column 2, lines 32+), the multilayer film including a removed portion at a selected location at which at least one lamina set is removed (see Fig. 1g) to control phase shift in a reflected wavefront from the multilayer film, the removed portion having a predetermined distribution with respect to amount of layer material removed.
6. With respect to claims 54 and 55, Yan discloses an X-ray exposure apparatus (Fig. 4, 4000 – "wafer exposure tool"), comprising an X-ray optical system as recited in claim 54. Yan discloses EUV, which is synonymous in the art with soft X-rays.
7. With respect to claims 58 and 59, Yan discloses an X-ray exposure apparatus comprising: an X-ray source (Fig. 4, 4010) that generates an X-ray beam (4012); an illumination-optical system (4020) that guides the X-ray beam from the X-ray source to a reticle (4030) that defines a pattern; and a projection-optical system (4040) that guides the X-ray beam from the reticle to a lithographic substrate coated with a resist (4050), so as to transfer the pattern from the reticle to the substrate, the exposure apparatus including at least one multilayer-film mirror as recited in claim 53, wherein the at least one multilayer-film mirror is situated in at least one of the illumination-optical system, the projection-optical system, and the reticle (4030).

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Barbee, Jr. (USPN 4,915,463) discloses a multilayer diffraction grating. Iwamatsu et al. (USPN 5,514,499) disclose a phase shifting mask comprising a multilayer structure and method of forming a pattern using the same.

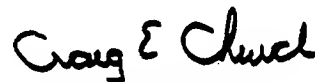

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jurie Yun whose telephone number is 571 272-2497. The examiner can normally be reached on Monday-Friday 8:30-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ed Glick can be reached on 571 272-2490. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 1 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONEO (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 27 November 2002.
- 2a) ☐ This action is FINAL. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-59 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☐ Claim(s) _____ is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☒ Claim(s) 1-59 are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. §§ 119 and 120

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
* See the attached detailed Office action for a list of the certified copies not received.
- 13) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application) since a specific reference was included in the first sentence of the specification or in an Application Data Sheet. 37 CFR 1.78.
a) ☐ The translation of the foreign language provisional application has been received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121 since a specific reference was included in the first sentence of the specification or in an Application Data Sheet. 37 CFR 1.78.

Attachment(s)

- 6) ☐ Other: _____

DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-26 and 56, drawn to a device for milling, classified in class 156, subclass 345.1+.
 - II. Claims 27-52 and 57, drawn to a method of milling, classified in class 216, subclass 24.
 - III. Claims 53-55, 58, and 59, drawn to a multilayer-film mirror, classified in class 378, subclass 34.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the method of milling could be done with a device other than the milling device claimed in Group I.
3. Inventions I and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are a milling device and a multilayer-film mirror. The multilayer-film mirror as claimed does not necessarily have to use the milling device being claimed.

4. Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are a method of milling and a multilayer-film mirror. The multilayer-film mirror as claimed does not necessarily have to be produced by the milling method being claimed.

5. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, and the search for Group II is not required for Group III, and likewise for Groups I and III, restriction for examination purposes as indicated is proper.

6. A telephone call was made to Donald L. Stephens Jr. on 11/18/03 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Art Unit: 2882

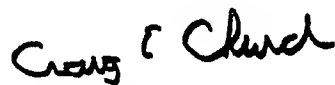

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Julie Yun whose telephone number is 703 308-3535.

The examiner can normally be reached on Monday-Friday 8:30-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ed Glick can be reached on 703 308-4858. The fax phone number for the organization where this application or proceeding is assigned is 703 308-7722.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703 308-0956.

DETAILED ACTION

1. This restriction supersedes the prior restriction of 12/5/03.

Election/Restrictions

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-26, drawn to a device for milling, classified in class 156, subclass 345.1+.
 - II. Claims 27-52, drawn to a method of milling, classified in class 216, subclass 24.
 - III. Claims 53-59, drawn to a multilayer-film mirror, classified in class 378, subclass 34.

The inventions are distinct, each from the other because of the following reasons:

3. Inventions II and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus can be used for milling a different product such as a product with one layer as opposed to multi-layers.
4. Inventions I, II, and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are a milling device and a multilayer film mirror. The multilayer film mirror as claimed does not necessarily have to use the milling device

being claimed, and the multilayer film mirror as claimed does not necessarily have to be produced by the milling method being claimed.

5. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, and the search for Group II is not required for Group III, and likewise for Groups I and III, restriction for examination purposes as indicated is proper.

6. If applicant elects Group I or Group II from above, then there is also a species restriction.

FIRST SPECIES RESTRICTION

7. This application contains claims directed to the following patentably distinct species of the claimed invention:

Species A: lapping

Species B: ion-beam milling

Species C: chemical-vapor-machining

Species D: reactive ion etching

Species E: laser ablation.

8. If applicant elects Group II, then there is also a second species restriction.

SECOND SPECIES RESTRICTION

9. This application contains claims directed to the following patentably distinct species of the claimed invention:

Species i: stepwise (claim 29)

Species ii: smoothly contoured (claim 30)

Species iii: lateral distribution (claim 31)

10. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1-5 and 26 are generic for Group I, and claims 27-33 and 40-52 are generic for Group II.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over

Art Unit: 2882

the prior art, the evidence or admission may be used in a rejection under 35

U.S.C. 103(a) of the other invention.

NOTE: To be fully responsive, applicant must elect Group I, II, or III and if Group I or II is elected, applicant must also elect Species A, B, C, D, or E and optionally also Species i, ii, or iii.

11. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

12. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jurie Yun whose telephone number is 571 272-2497. The examiner can normally be reached on Monday-Friday 8:30-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ed Glick can be reached on 571 272-2490. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Art Unit: 2882

AMENDMENT AND REPLY TO OFFICE ACTION

This paper is submitted in reply to the Office action, dated December 4, 2003. Please amend the subject application as follows:

Amendments to the Specification are reflected in the attached substitute specification.

Amendments to the Claims are reflected in the listing of claims, which begins on page 2.

Remarks begin on page 6.

Amendments to the Claims

1-8 (canceled)

9. (new) A method for manufacturing a multi-layered-film reflective mirror, comprising:

depositing, on an obverse surface of a substrate, a multi-layered film comprising superposed layers of at least two types of substances having mutually different respective refractive indices, the layers being superposed in an alternating manner with a constant period length to form a reflective surface of the mirror;

in a region of the reflective surface requiring phase correction of a wavefront of light reflected from the multi-layered film, locally scraping the multi-layered film in the region to correct the phase; and

on a reverse surface of the substrate, depositing a film of a substance that imparts a deformation to the substrate serving to cancel at least a portion of substrate deformation caused by the scraping of the multi-layered film.

10. (new) The method of claim 9, wherein the film deposited on the reverse surface is deposited at least in a region of the reverse surface opposite the region of the reflective surface.

11. (new) The method of claim 9, wherein:
scraping in the region of the reflective surface imparts a corresponding stress to the substrate; and

the film deposited on the reverse surface imparts a corresponding stress to the substrate that serves to cancel at least a portion of stress imparted to the substrate by the scraping in the region of the reflective surface.

12. (new) The method of claim 9, wherein the multi-layered film is formed with an internal stress of 50 MPa or less.

13. (new) The method of claim 9, wherein:
the multi-layered film comprises superposed layers of Mo/Ru/Mo/Si/ . . . ; and
after forming each Mo layer, the newly formed Mo layer is irradiated using an ion beam.
14. (new) The method of claim 9, wherein the multi-layered film comprises at least one layer comprising Mo and at least one layer comprising Si.
15. (new) The method of claim 9, further comprising forming a layer of a substance comprising Si on the reflective surface after performing the local scraping of the multi-layered film.
16. (new) A method for manufacturing a multi-layered-film reflective mirror,
comprising:
forming, on an obverse surface of a substrate, a first multi-layered film comprising superposed layers of at least two types of substances having mutually different respective refractive indices, the layers being superposed in an alternating manner with a constant period length to form a reflective surface of the mirror;
in a region of the reflective surface requiring phase correction of a wavefront of light reflected from the multi-layered film, locally scraping the first multi-layered film in the region to correct the phase;
on a reverse surface of the substrate, forming a second multi-layered film having a structure that is substantially similar to the first multi-layered film formed on the obverse surface; and
in a region of the second multi-layered film opposite the region of the reflective surface, locally scraping the second multi-layered film to impart a deformation to the substrate serving to cancel at least a portion of substrate deformation caused by the scraping of the multi-layered film.
17. (new) The method of claim 16, wherein in the region of the second multi-layered film in which the second multi-layered film is scraped, the thickness of the second multi-layered

film left after scraping is substantially equal to the thickness of the first multi-layered film left after scraping in the region of the first multi-layered film.

18. (new) The method of claim 16, wherein the scraping of the second multi-layered film is sufficient to impart a corresponding stress to the substrate that serves to cancel at least a portion of stress imparted to the substrate by the scraping of the first multi-layered film in the region of the reflective surface.

19. (new) The method of claim 16, wherein an amount of the second multi-layered film removed by scraping is substantially equal to an amount of the first multi-layered film removed by scraping.

20. (new) The method of claim 16, wherein the first multi-layered film comprises at least one layer comprising Mo and at least one layer comprising Si.

21. (new) The method of claim 16, further comprising forming a layer of a substance comprising Si on the reflective surface after performing the local scraping of the first multi-layered film.

22. (new) A method for manufacturing a multi-layered-film reflective mirror, comprising:

depositing, on a surface of a substrate, a multi-layered film comprising superposed layers of at least two types of substances having mutually different respective refractive indices, the layers being superposed in an alternating manner with a constant period length to form a reflective surface of the mirror; and

in a region of the reflective surface requiring phase correction of a wavefront of light reflected from the multi-layered film, locally scraping the multi-layered film in the region to correct the phase, wherein an amount of the multi-layered film removed by scraping is based on an influence on deformation of the substrate caused by the scraping.

23. (new) The method of claim 22, wherein the multi-layered film comprises at least one layer comprising Mo and at least one layer comprising Si.

24. (new) The method of claim 22, further comprising forming a layer of a substance comprising Si on the reflective surface after performing the local scraping of the multi-layered film.

25. (new) A method for manufacturing a multi-layered-film reflective mirror, comprising:

depositing, on a surface of a substrate, a multi-layered film comprising superposed layers of at least two types of substances having mutually different respective refractive indices, the layers being superposed in an alternating manner with a constant period length to form a reflective surface of the mirror; and

in a region of the reflective surface requiring phase correction of a wavefront of light reflected from the multi-layered film, locally scraping an amount of the multi-layered film in the region to correct the phase and cause a corresponding deformation of the substrate, wherein the amount of the multi-layered film removed by scraping is determined so that a phase, representing a combination of (i) a phase of the reflected wavefront as modified by the deformation and (ii) a phase of the reflected wavefront as modified by the scraping, is equal to a desired correction amount.

26. (new) The method of claim 25, wherein the multi-layered film comprises at least one layer comprising Mo and at least one layer comprising Si.

27. (new) The method of claim 25, further comprising forming a layer of a substance comprising Si on the reflective surface after performing the local scraping of the multi-layered film.

REMARKS

Reconsideration of the subject application is requested in view of the foregoing amendments and the following remarks.

The search performed by the examiner in connection with performing a substantive examination of the claims is appreciated.

Attached hereto is a substitute specification in which various typographical, spelling, and grammatical errors, as well as awkward diction and syntax, are corrected. The specification as filed contained these various faults as a result of it being a literal translation of the Japanese text in the priority document. The substitute specification contains no new matter.

The status of claims 4-7 as being free of the prior art of record is noted with thanks.

Claims 1-8 are pending. In this paper, claims 1-8 are canceled without prejudice and replaced with new claims 9-27. The correspondence of the new independent claims with the old independent claims is as follows:

New claim 9 corresponds with old claim 3.

New claim 16 corresponds with old claim 4.

New claim 22 corresponds with old claim 5.

New claim 25 corresponds with old claim 6.

The new independent claims clear up the various issues directed to alleged confusion and indefiniteness raised in the Office action. Also, for example, the terms "obverse" and "reverse" were used in the new claims to denote the respective surfaces of the substrate, so as to remove possible confusion as to the specific surface being referred to.

Independent claim 1 was canceled without any corresponding new claim being asserted. This cancellation of claim 1 is not to be construed as any acquiescence by Applicants to any position of the examiner regarding this claim. Applicants reserve the right to prosecute claim 1 in a corresponding continuation application or other manner as Applicants see fit.

The correspondence of the new dependent claims with the old dependent claims is as follows:

New claim 12 corresponds with part of old claim 1.

New claim 13 corresponds with old claim 2.

New claim 14 corresponds with old claim 7.

New claim 15 corresponds with old claim 8.

New claim 20 corresponds with old claim 7.

New claim 21 corresponds with old claim 8.

New claim 23 corresponds with old claim 7.

New claim 24 corresponds with old claim 8.

New claim 26 corresponds with old claim 7.

New claim 27 corresponds with old claim 8.

New claims 12-15, 20-21, 23-24, and 26-27 were prepared to correct various allegedly confusing and indefinite words in the corresponding old claims and to remove multiple dependency as pointed out by the examiner.

New dependent claims 10-11 and 17-19 have no counterparts to any claims as filed, but are dependent nevertheless.

This application was filed as a literal translation into English from the original Japanese. As a result of the many differences in syntax, diction, and correspondence of terms in Japanese versus English, various possibly confusing and indefinite words appeared in the originally filed claims, as noted on pages 2-3 of the Office action. New claims 9, 16, 22, and 25 were drafted to correct these issues. Hence, it is believed that all the informalities raised by the examiner are corrected.

It is pointed out that the term "period length" as used in the new claims (this term was "periodic length" in the old claims) refers to the dimension "d" (thickness of a layer pair) in FIG. 8A. See specification as filed, page 6, line 26; page 7, line 1-2; page 9, line 22; page 10, line 3; page 12, lines 5-6; but compare with page 12, lines 6-7; page 20, line 27; page 21, line 1; page 25, lines 16-17; and page 27, lines 19-20. "Period length" is used in the new claims because this term is a term of art denoting the dimension "d".

In the new claims the term "synchronously" was deleted to address the concern raised by the examiner.

The new claims use the term "reflective surface" but in a manner that is believed to eliminate the confusion raised by the examiner.

The confusion regarding "ion beam irradiated to a surface . . ." is believed to be eliminated in new claim 13.

The confusion related on page 3, lines 1-6 of the Office action is believed to be eliminated in the relevant new claims.

Claims 1-3 stand rejected for obviousness-type double patenting. This rejection is moot with respect to claim 1, which is canceled without prejudice, and with respect to claim 2 (now new claim 13 which depends from a different claim than any claim corresponding to old claim 1).

Regarding claim 3 (now new claim 9), Applicants point out that none of the prior art of record teaches or suggests, in the context of manufacturing a multi-layered-film reflective mirror, forming a film on a reverse side of the substrate in order to produce a deformation of the substrate capable of canceling at least a portion of substrate deformation caused by the scraping of the multi-layered film. Thus, none of the prior art of record teaches or suggests a combination of this step in combination with the other steps recited in new claim 9. Therefore, new claim 9 is properly allowable over the cited references without any need for a terminal disclaimer.

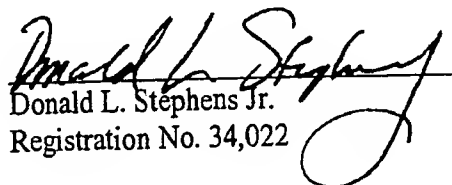

The new claims 9-27 are in condition for allowance, and action to such end is requested.

Applicant has a right to an interview at this stage of prosecution. If any issues remain unresolved after consideration of the contents of this paper, the examiner is requested to contact the undersigned to schedule a telephonic interview. Any inaction by the examiner to make such contact, followed by issuance of a final action, will be regarded as an acquiescence by the examiner to grant an interview as a matter of right after the final action.

Respectfully submitted,

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(e). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-8 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 1-3 is/are rejected.
- 7) ☒ Claim(s) 4-8 is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on ____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. §§ 119 and 120

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. ____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
* See the attached detailed Office action for a list of the certified copies not received.
- 13) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application) since a specific reference was included in the first sentence of the specification or in an Application Data Sheet. 37 CFR 1.78.
a) ☐ The translation of the foreign language provisional application has been received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121 since a specific reference was included in the first sentence of the specification or in an Application Data Sheet. 37 CFR 1.78.

DETAILED ACTION*Claim Objections*

1. Claim 8 is objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from another multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claim 8 is not been further treated on the merits.

2. Claims 1-7 are objected to because of the following informalities:

(1). The phrase "periodic length" recited in claims 1, and 3-6 is confusing since it is not clear what is considered to be the *length* for a multi-layered film. A multi-layered film in general comprises *alternatively arranged layers* of at least two materials with different refractive index. The multi-layer structure may include *periodic optical thickness* for each of the layer which means that the *refractive index times the actual physical thickness* of each layer assumes a constant value, where the constant value is periodically arranged. The multi-layered film has *periodically constant optical thickness* for the layers. Also it is not clear how could the two substances be "synchronously deposited with a constant periodic length", as recited in claims 1 and 3-6, since the two substances are understandable be deposited *one on top of the other* to form the *multi-layered structure*, they therefore cannot be "synchronously deposited".

(2). The phrase "*in a reflective surface*" recited in claims 1 and 3-6 is confusing and indefinite since it is not clear what is this reflective surface. Technically speaking, each layer of the multi-layered film is capable of partially transmitting and reflecting incident light on the surface. The reflected light from *all* the surfaces of the multi-layer interfere to each other to give a final reflective wave front in accordance with the reflective property of the multi-layer mirror. It is therefore not sure which surface is considered here as the "reflective surface" since all of them (more than one) reflect light.

(3). The phrase "an ion beam is irradiated to a surface after forming each Mo layer" recited in claim 2 is confusing and indefinite since it is not clear which surface is referred here.

Art Unit: 2872

(4) The phrase "the multi-layered film formed on the back surface of the substrate is locally scraped at portions correspondent to the portions where in the multi-layered film on the surface of the substrate is locally scraped ...with a same thickness ... on the surface of the substrate." recited in claim 4 is extremely confusing and indefinite. There are two "multi-layered film" recited in the claim, so the term "the multi-layered film" is indefinite since it is not clear which one is referred here. Also the phrase is very narrative and confusing.

Appropriate correction is required.

Allowable Subject Matter

3. The following is a statement of reasons for the indication of allowable subject matter: of the prior art references considered, none has disclosed a method for manufacturing a multi-layered film reflection mirror that is comprised of a *multi-layered film* with at least two types of substances having different refractive indices respectively deposited on a substrate, wherein the *multi-layered film on the substrate is locally scraped in order to correct a phase of a reflective wave front from the utmost reflective surface of the mirror*. In different embodiments as recited in Claim 3, *an additional film or a multi-layered film* is formed on a back surface of the substrate in order to produce a *deformation of the substrate* that *cancels a deformation of the substrate caused by the scraping of the first multi-layered film*. Claim 4 recites an *additional multi-layered film* having approximately the *same structure* is formed on the back surface of the substrate wherein the *additional multi-layered film is also scraped at the corresponding portions* with respect to the *scraping portions of the first multi-layered film, with the same thickness*. Claim 5 recites that the *amount of scraping* of the multi-layer is based on the influence of the deformation of the substrate caused by the scraping. Claim 6 recites that the phase of the reflective wave front from the utmost surface of the mirror, *combines the phases* caused by the modifications of the wave front by the *deformation of the substrate caused by scraping the multi-layered film and by locally scraping the multi-layered film*, and equals to a desired correcting amount.

Art Unit: 2872

Prior art reference US patent 6,235,434 issued to Sweeney et al teaches a method for correcting amplitude and/or phase defect in photomask blank that includes modifying or altering a portion of the *absorber pattern*. However this reference does not teach about scraping the multi-layered film or having additional layered film.

The prior art reference US patent 6,319,635, issued to Mirkarimi et al teaches to use a multi-layered buffer layer interposed between a reflective coating and a substrate to correct or minimize the defect on the substrate. But no scraping of the multi-layered film or the reflective coating is disclosed.

The prior art reference US patent 4,420,222, issued to Bret et al teaches to induce local imperfections at corresponding positions of the piezoelectric layers on both side of the substrate in order to compensate defect. However the local imperfections is not formed by locally scraping a multi-layered film but is formed by electrical effect to the piezoelectric layers.

The prior art reference US patent 6,335,129, issued to Asano et al teaches a method of removing the defect occurring portion of the multi-layered film completely in order to correct the defect of the substrate. No locally scraping of the multi-layer film is disclosed.

The prior art reference US patent 5,358,806, issued to Haraichi et al teaches a method of removing the defect occurring portion of the multi-layered film completely in order to correct the defect of the substrate. No locally scraping of the multi-layer film is disclosed.

Double Patenting

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Art Unit: 2872

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

5. Claims 1-3 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1, 8, 22, 58 and 67 of copending Application No. 10/012,739. Although the conflicting claims are not identical, they are not patentably distinct from each other because they both disclose essentially the same feature of removing or scraping the multi-layered film of the multi-layered mirror for correcting phase or aberrations of the light.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

6. Claims 1-3 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 24, 65, 75, 87 and 93 of copending Application No. 10/229,638. Although the conflicting claims are not identical, they are not patentably distinct from each other because they both disclose essentially the same feature of removing or scraping the multi-layered film of the multi-layered mirror for correcting phase or aberrations of the light.

7. Claims 1-3 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1, 27 and 53 of copending Application No. 10/241,959. Although the conflicting claims are not identical, they are not patentably distinct from each other because they both disclose essentially the same feature of removing or scraping the multi-layered film of the multi-layered mirror for correcting the phase or aberrations of the light.

Conclusion

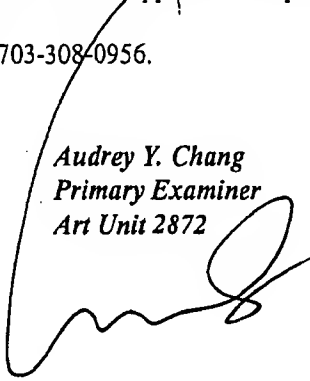

Art Unit: 2872

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Audrey Y. Chang whose telephone number is 703-305-6208. The examiner can normally be reached on Monday-Friday (8:00-4:30), alternative Mondays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Drew Dunn can be reached on 703-305-0024. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0956.
